Introduction

API Introduction

- All API are using ISO-8601 as time format.
- Please refer to appendix for any IDs look up.

API Specification

➤ API Request

`http://domain name/interface name`

➤ URL descriptions

Domain name: Provide the domain name of external interface

Interface name: The API method that is going to be used, such as
`api/CreateMember`

➤ Return Result

The returned result is in JSON format. An example is listed below:

```
{  
  "error_code": 0,  
  "message": ""  
}
```

API Method

CreateMember Method

It is to create member data into Sportsbook. After creating member successfully, must do FundTransfer so that member can bet in sports.

GetBetDetail Method

To get betting ticket data. Max 500 transactions will be returned per request.

For RNG type tickets (Saba Casino/Macau/PP/SG/PG Soft/Joker/Arcadia Gaming/Vgaming/CG/Habanero/MaxGame /AdvantPlay/AdvantPlay Mini), you will get a summary ticket via GetBetDetail (one player/one bettype/one day). If you need the detail ticket of each bet, please use GetRNGBetDetail.

Integration method: (Rolling method)

Please use version_key=0 for the first time, and use the last version key from the returned data and use it to retrieve the updated data for the next time you trigger GetBetDetail

Suggested time intervals will be 6~10 seconds

When the last_version_key returned is the same with the version_key you input, please call GetBetDetail 10 minutes later to avoid any missing tickets

When the last_version_key returned is different with the version_key you input and there's no data, it means there's no tickets belong to your site within this period. Please use the last_version_key returned and continue to call GetBetDetail

◆version_key value will increase progressively and will not repeat, it represents the bet version and not necessarily be serial number because it is arranged in all pool. Thus, skipped numbers are a common situation. Each batch will return up to 500 bets, but sometimes might not be up to 500 bets because of the time to retrieve bets is too long. Or it might be due to there is no tickets that belong to your site within the searching range of 19999 in our DB, in which, this is a normal situation.

When there is changes on the ticket status, Eg: from Waiting > Running > Lose the trans_id of this ticket will never change, but the version_key for this ticket will change twice.

Example:

Waiting: version_key=300

Running: version_key=500

Lose: version_key=1110
